DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Objections

2. Claim 1 is objected to because of the following informalities: "sends" in line 10 should be changed to "sending". Appropriate correction is required.
3. Claim 2 is objected to because of the following informalities: "sends" in line 14 should be changed to "sending". Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 3 recites the limitation "the multicast packet" in line 7. It is unclear which multicast packet this refers to. It is recommended that this be changed to "a multicast packet."

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tanaka in view of Chinnaswamy in further view of George. At least one calculation type address having bits "1" corresponding to destinations to which a multicast packet is to be transferred is disclosed in Tanaka, column 1, lines 60-63 (the address here is calculated to indicate the destinations of the multicast packet; it would inherently use bits "1" to indicate the destination). Claim 3 further specifies at least one directional route mask and at least one terminal mask, which is missing from Tanaka. However, a directional route mask having bits "1" corresponding to those directional routes into which a multicast packet is to be transferred is disclosed in Chinnaswamy, column 7, lines 20-23 (the mask in this reference indicates which routes a multicast packet should take, not the ultimate destination of the packet). A terminal mask having a bit "1" corresponding to that destination which is to receive the multicast packet is disclosed in George, column 12, lines 33-37. In light of this disclosure, it would have been obvious to one skilled in the art at the time of the invention to have all three components in one system. The motivation would be to route the multicast packets efficiently.
